GERM-FREE LIVING ENVIRONMENT

Hygiene powder

MS DRYCARE

DES

MS DryCare Des is an active disinfectant powder with high moisture absorption and a pleasant smell. It is active against bacteria and yeasts.

- **Disinfecting hygiene powder against bacteria**
- **Very high moisture absorption >200%**
- **pH neutral**
- **Improved animal health and comfort**
- **Contributes to clean living environment**
- **Effective against**

Ingredients:
Sodiumdichloroisocyanurate, Concentration: 0%
Sodiumdichloroisocyanurate will dissociate in solution, what will lead to in-situ generation of oxidizing agents.

For optimal housing hygiene

Registration

MS DryCare Des will be registered in the Netherlands and will be registered under BPR for:
• Use on hard surfaces and spaces in animal housing against bacteria and yeasts (PT3).
Contact your local advisor for specific registration regulation and status in your country.

Disinfecting Efficacy

Standard norms were used to prove the efficacy of MS DryCare Des against various pathogens (bacteria and yeasts). All EN norms used are applicable for testing chemical disinfectants and antiseptics for the use in veterinary areas. These tests are performed in accredited labs and the effective concentration is determined according to the reduction pass criterium given in the respective norm.

Norm	Description
EN 1656	Quantitative suspension test for the evaluation of bactericidal activity
EN 1657	Quantitative suspension test for the evaluation of fungicidal or yeasticidal activity.
EN 14349	Quantitative surface test for the evaluation of bactericidal activity on non-porous surfaces.
EN 16438	Quantitative surface test for the evaluation of fungicidal or yeasticidal activity on non-porous surfaces.

MS DryCare Des is approved for efficacy against:

Bactericidal Efficacy: *Enterococcus hirae, Escherichia coli, Klebsiella pneumoniae, Pseudomonas aeruginosa, Proteus vulgaris, Salmonella typhimurium, Staphylococcus aureus.*
Yeasticidal Efficacy: *Candida albicans*

Moisture absorption

One of the most important properties of a drying powder is the absorption of moisture. The more moisture the product can absorb, the less material is needed to keep a dry environment for the animals. MS DryCare Des can absorb more than 200% of its own weight and volume.

Settling

Drying powders will be mixed with manure when removed from the stable. To ensure good processing of the manure, the drying powder should not settle and form hard cakes that are difficult to remove. MS DryCare Des does not settle and will be removed easily together with the manure.
